Dear Hiring Manager,

I'm extremely excited to be applying to the Test Automation Engineer position at Nokia. Nokia was highly recommended to me and I found this job offering directly on the company's website. I'm thrilled to have the opportunity to offer my talents to Nokia, a world leader in the telecommunication business.

With my object orientated programming and scripting skills in python in addition to my physics background, I am going to excel at your company. As a highly analytical individual, I aim to always make rational and objective observations about the world around me. Therefore, I am very talented in identifying and solving problems with out-of-the-box thinking.

While working in my previous role at ETH Zürich, I developed a setup to evaluate future detectors for the Large Hadron Collider. In this position I was responsible for several measurement campaigns leading and organising a small team to successful research. I strongly value the beauty and power of Linux, which I'm using for both my work and my private life.

While at ETH Zürich, I was able to acquire many new skills and developed myself on a great scale. Writing software for instrumenting, data-acquisition and data analysis, I learned many things about programming, networks, versioning control system and a lot of other things. In general, I'm very eager and motivated to learn new things.

I'm grateful for this opportunity, and thank you for considering my application. I'm looking forward to learning more details about the Test Automation Engineer position and Nokia as a whole. I'm a committed individual looking to join a goal-oriented team, and I feel that Nokia offers me an environment where I can apply my skills on worthy projects.

Sincerely,

Michael Reichmann
